

## TP 150 PTO WOODCHIPPER

This is a small, compact and effective wood chipper with hydraulic feeding for chipping branches of up to 150mm in diameter. The integrated hydraulics system controls the two horizontal rollers which ensure problem-free feeding. The TP 150 is a disc chipper where the wood is cut at a 90° angle. The wood chipping is done with great efficiency and with a nice, uniform chip quality. Required power from 25 - 70 hp.

### The TP 150 comes standard with the following:

- Integrated hydraulics system
- Two knives
- Two anvils in Hardox 400
- Two hydraulically powered feed rollers
- Revolving ejector spout
- Wipers to ensure against accumulation of material at feed rollers and rotor housing
- Hydraulic adjustment of the roller speed and thereby the chop size
- Rotor lock for securing the rotor disc when changing knives
- Operating bar start/stop/reversing of the feed rollers
- PTO shaft for TP 150 PTO
- Stress control system, TP Pilot - for TP 150 Mobile & TP 150 Mobile Light

The perpendicular cutting angle of the wood chippers in the Park series results in very uniform and short fibered chips, the length of which can be varied by adjusting the speed on the infeed rollers. These are perfect for jobs where optimal and fast composting of green refuse is required.
